Sir:

In response to the Office Action dated October 22, 2003, please amend the above-identified application as follows:

IN THE CLAIMS:

Please enter the following amended claims:

1. (Currently Amended) A method of controlling the load in a mobile communication system in a system in which at least one mobile station includes means for utilizing discontinuous transmission, comprising:
- transmitting a control signal via radio path to said at least one mobile station in order to regulate the parameters indicating how discontinuous transmission should be implemented by said at least one mobile station, and
- regulating, by control regulation means of said at least one mobile station as a response to said control signal, parameters indicating how related to discontinuous transmission should be implemented; and
- transmitting a control signal via a radio path to said at least one mobile station for regulating its parameters related to discontinuous transmission in such a manner that the at least one mobile station transmits telecommunication signals to the system more seldom or more often.
